

My Favorite Google "Search Query Terms"

term	example	description
info	info:www.seonitro.com	<p>Web Document Info: The query prefix "info:" returns a single result for the specified URL if it exists in the index.</p> <p><i>Note: Once here, you can easily get info on backlinks, cache, related and pages indexed</i></p>
link	link:www.seonitro.com	<p>BackLink Data: The query prefix "link:" lists web pages that have links to the specified web page. There can be no space between "link:" and the web page URL.</p> <p><i>Note: Google is never up to date on this so use Yahoo or alltheweb.com for more current backlinking.</i></p>
site	site:www.seonitro.com	<p>Page Index Data for URL: The query prefix "site:" lists web pages that exist in the index. There can be no space between "link:" and the web page URL.</p> <p><i>Note: This is where you can tell if your site is in Google's index. If it says "Sorry, no information..." you either haven't been found yet, or you got banned! =:0</i></p>
cache	cache:www.seonitro.com cache:www.seonitro.com linking	<p>Cached Results Page: The query prefix "cache:" returns the cached HTML version of the specified web document that the Google search crawled. There can be no space between "cache:" and the web page URL. If you include other words in the query, Google will highlight those words within the cached document.</p>
related	related:www.seonitro.com	<p>Related Search: The query prefix "related:" lists web pages that are similar to the specified web page. There can be no space between "related:" and the web page URL.</p>
"keyword"	"seo articles"	<p>Phrase Search: Search for complete phrases by enclosing them in quotation marks or connecting them with hyphens. Words marked in this way will appear together in all results exactly as entered.</p>
allintitle	allintitle: seo articles	<p>Title Search: Starting a query with the term "allintitle:" restricts the results to those with all of the query words in the title.</p>
allintext	allintext: backlinking strategies	<p>Text Search: Starting a query with the term "allintext:" restricts the results to those with all of the query words in only the body text, ignoring link, URL, and title matches.</p>
allinurl	allinurl: seo	<p>Text Search: Starting a query with the term "allinurl:" restricts the results to those with all of the query words in the result URL.</p>
